QUALIFICATION PROFILE

Computer Science student at Binus University specialized in Network Security. Passionate about safeguarding digital environments and ensuring data integrity through secure and efficient network systems. Skilled in problem-solving, teamwork, and quick adaptation to emerging cybersecurity tools and technologies. Experienced in developing projects that focus on threat detection, vulnerability analysis, and secure network architecture. Eager to apply ethical hacking principles and risk management strategies to real-world challenges.

EDUCATION

Degree in Computer Science (Streaming in Network Security)
Bina Nusantara University | Kemanggisian, West Jakarta, Indonesia

Sep 2023 - Present
(Expected Date of Completion: 2027)

TECHNICAL SKILLS

Front-end Development | Back-end Development | Software Development | UI/UX Design | Ethical Hacking | Penetration Testing | Augmented Reality | Prototyping (Figma) | Problem-Solving | Collaboration | Fluent English (IELTS 7.5)

WORK EXPERIENCE

IT Security Intern – PT Asuransi BRI Life

Feb 10 - July 31, 2026

IT Risk Management & Governance | Red Team/Pentester

- Conducted penetration testing on company applications and websites to identify vulnerabilities before deployment.
- Identified security flaws and created Vulnerability Assessment (VA) and pentesting reports for developers.
- Performed API testing to ensure secure backend functionality and prevent potential breaches.
- Collaborated with development teams to ensure timely remediation of security findings.

ACADEMIC & PERSONAL PROJECTS

Lumina Skin – Intelligent Skincare Assistant (UI/UX Design)

2024

Bina Nusantara University | HCI Final Project

- Designed a knowledge-based skincare assistant app that helps users find suitable skincare products based on their skin type, concerns, and preferences.

Academic Project - AshAway (AR Anti-Smoking Education App)

2024

Bina Nusantara University | Research Project

- Designed and built an AR mobile app with Unity & Vuforia for Anti-Smoking Education.
- Included educational features such as AR 3D visualizations, mini quizzes, and informative videos to encourage behavioral change.

Smart Attendance System – AI-Based Facial Recognition Platform

2025

Bina Nusantara University | Research Methodology Project

- Developed an AI-driven attendance system that utilizes facial recognition and machine learning to automate and secure student attendance tracking in classrooms.
- Implemented the system using Python, FaceNet, and deep learning algorithms, supported by real-time camera integration and a MySQL database for attendance data management.

WeCWater – Community-Based Marine Pollution Platform

2025

Bina Nusantara University | Software Engineering Project

- Developed a web-based application that connects volunteers, communities, and organizations to collaborate in cleaning and preserving marine environments.
- Built the frontend and backend systems using frameworks such as React.js and Laravel, supported by a MySQL database..
